

R&D Engineer – Linux Developer

Description

You are part of our Product Development team and you are responsible for:

- Product Definition scoping. Understand the requirements and estimate the complexity.
- End to end software development.
- Product Engineering, Documentation and QA.
- Training and handover of the product to the service team.

Your Profile

You have a Bachelor degree in information technology or more.

You are used to work in a Linux environment and have a general interest in Open Source software.

Knowledge of open standards like SIP, WebRTC and related technologies is a plus.

You are able to develop quality software using the following languages and technologies:

- Object Oriented Programming,
- Networking (TCP/IP),
- Linux OS,
- PHP, HTML/CSS, Javascript,
- MySQL,
- C, C++,
- Python or Perl

You speak English and French or Dutch fluently.

Your top priority is customer satisfaction.

You have a strong empathy for your colleagues and customers.

You are a team player.

You are deliverable oriented, well organized and have a structured approach.

You are able to give and accept constructive feedback.

You develop a positive mind-set.

Our Offer

A full time contract with a salary/benefits package in line with your profile with many fringe benefits: medical insurance, a pension scheme and meal vouchers.

A challenging and interesting position, in which you have the possibility to make the difference and have a real influence on the development of our innovative products.

An interesting work environment with a real opportunity to build your career.
