

CUSTOMERS

ALSTOM

ALSTOM TRANSPORT B.V. supplies electric systems and equipment for rail transport and electric vehicles. A LIBERTY 700 server meets the communication requirements of around one hundred users on a construction site of a nuclear power plant in Holland.

LE FOUR INDUSTRIEL BELGE manufactures industrial furnaces and heating equipment used to process steel wire, glass and ceramic. Its customers are located across the five continents. Le Four Industriel Belge is equipped with a LIBERTY 700 communication server which simultaneously manages two collections of fixed and DECT telephones. By opting for an IP operator, Le Four Industriel Belge has seen its communication costs fall considerably.

HOSPIMEDIA is an agency specialising in professional news for the health sector in France. Hospimedia provides reference information to more than 10,000 professionals. The company offices are equipped with a LIBERTY 700 server. Several IP telephony operators were selected in order to benefit from the most competitive rates according to the destinations called.

IEE SA is a multinational company specialising in the development of sensing solutions for the automotive sector. With its 1,200 users, it represents one of the largest communication networks based on Asterisk in the world, and probably the largest in Europe. The deployed system is based on two active redundant servers which simultaneously manages local users of IP telephones, users of DECT mobiles employing a SIP link and remote users of softphones or IP telephones.

SEDIS LOGISTICS offers personalised solutions for goods transportation meeting commercial, operational and economic goals. SEDIS is equipped with a LIBERTY 700 communication server which, used in conjunction with a traditional system, manages the communications of 150 users, including 50 full IP users.

SOCONORD GROUP

SOCONORD GROUP is an international holding company with head offices situated in Brussels. The group has more than 40 years of experience in OCTG and pipe-line supply. It employs 500 people in more than 50 countries. SOCONORD is equipped with a LIBERTY 700 server. All communications are managed by an IP telephony operator, enabling a drastic reduction in costs.

SONACA S.A. is an aerospace construction company with head offices situated in Belgium. It is the parent company of a group of companies located in Brazil, Canada and the United States. The SONACA Group employs more than 2,000 people around the world. SONACA in Belgium is equipped with a Be IP IPBX, for redirecting incoming calls to their main number. A Be IP mini server is used in conjunction with the existing PABX in order to offer advanced IVS (Interactive Voice Service) functions.

“Don’t worry...
Be IP !”

Voice over IP systems for SMEs & business management

be ip 

Managing your telephony has never been as fast and efficient.

Be IP's LIBERTY 200 and 700 communication servers offer outstanding reliability.

They have been developed to respond to the highest possible number of user requirements by offering as standard all useful call functions derived both from classic telephony and the world of IP.

Be IP systems source their wide range of telephone units from a very large number of manufacturers, guaranteeing real independence to their owners.

This autonomy is also to be found in their simple and intuitive management, enabling owners to manage the development of communication themselves in their own businesses.

A simple pricing structure gives users the option of purchasing additional modules such as virtual fax, statistical analysis or monitoring of communication costs, at a fixed price and therefore independently of the number of users.

The adoption of IP solutions enables users to push the limits of integration with the most popular office suites, SQL databases, CRMs, ERPs and many applications.

LIBERTY 200

LIBERTY 700

- 1U Rack Server
- Compact size
- Hot-pluggable redundant disk drives
- Up to 50 users
- 800 hours of storage and voice messages

- Hewlett-Packard 1U Rack Server
- Hot-pluggable redundant rapid disk drives
- Hot-pluggable redundant power supply
- Specially designed for critical applications
- 2,000 hours of storage and voice messages

OPTIONAL MODULES

Send and receive faxes without a fax machine.

The BeIP Fax Server module enables you to send and receive your faxes through your e-mail.

Outgoing faxes are automatically converted into PDF files.

Real time billing facility.

Based on the history of calls made and predefined tables of prices, the BeIP Billing module enables you to create a projected bill according to your own criteria: calls abroad, calls from a specific telephone, calls to a specific number etc.

Thanks to this module, you will be able to manage types of cost, link a group or user to a project, or simply manage your telephone bills efficiently.

Generating call statistics.

The BeIP Statistics module provides you with data concerning call response times, most active units, peak periods, lost calls and many other points.

Thanks to this data, you will always be able to take objective decisions on areas for improvement, whether they be qualitative, e.g. reception, or quantitative, e.g. increasing team numbers or the precise level of public network access necessary to run your business successfully.

DISTRIBUTORS - RESELLERS

.....

TELEPHONIE is specialised in designing and offering integrated ICT solutions & services in line with the customers' strategies, in order to support them achieving actual and future core business objectives. We are an innovative company; we were one of the first integrators to implement IP-based solutions in telecommunication, and today we are the first integrator capable of delivering complete end-to-end solutions with central management based on the IP-protocol. Our solutions include data & communication, alarm & access for buildings, and intelligent video surveillance & security technology.
